

Part I: “Definitions” (5 points each)

1. **Rigid non-designator**
 2. **Constructive empiricism**
 3. **Empirical adequacy**
 4. **Intensional ascent**
 5. **Creationism (about fictional characters)**
-

Part II: Short Answer (10 points each; answer *all* five)

1. **Ryle on imaginary objects**
Explain why Ryle thinks “Mr Pickwick is an imaginary being” is misleading if read as attributing a property to an object. What does he think such claims are really saying?
2. **Salmon vs. Kripke**
Explain Salmon’s objection to Kripke’s treatment of fictional and mythical names. Why does Salmon think Kripke’s strategy fails to solve the problem of empty names?
3. **Salmon’s positive theory**
Explain Salmon’s view that fictional characters are abstract artifacts. How does this help him explain both metafictional discourse and truth in fiction?
4. **Hayaki’s objection to creationism**
What is Hayaki’s “massive falsity” objection? Why does she think creationism gains ontological advantages only at significant semantic cost?
5. **van Fraassen and positivism**
Explain how van Fraassen’s constructive empiricism differs from logical positivism/logical empiricism. In your answer, say something about meaning, observability, and what it is to accept a scientific theory.
